<p>
    A flower, sometimes known as a bloom or blossom, is the reproductive structure
    found in flowering plants (plants of the division Angiospermae). The biological
    function of a flower is to facilitate reproduction, usually by providing a
    mechanism for the union of sperm with eggs. Flowers may facilitate outcrossing
    (fusion of sperm and eggs from different individuals in a population) resulting
    from cross-pollination or allow selfing (fusion of sperm and egg from the same
    flower) when self-pollination occurs.
